hoops as are observed on 76-mm guns. 3  4. Radio and radar installations:  A single-mast radio installation next to a radio truck was observed about 1 km east of the runway. Truck mounting a searchlight 60 to 80 mm in diameter was observed nearby. The Token-type radar set was still located nor of the runway. The model AA 4 MK 3 set was observed north of the eastern end of the runway as previously. Nearby was a Fishnet-type radar set which was next to a radio truck. 4  5. Large-scale construction projects were apparently planned south of the main entrance to the field outside of the fence, where large heaps of bricks were seen. Construction sheds and quartering barracks were under construction. Excavation work has not yet started the face of the extent of construction work.  1. Comment. The number of II-28s observed at the field agrees with the 25X assumed aircraft strength of the unit which is believed to be a reconnaissance regiment.
